We need to receive traffic reports and the weather reports for cities long before we can receive the AM or FM local stations. Sometimes we use the weather and traffice to determine which highway we will be using. So, to be able to recieve the weather for Washington DC while we are still in Ohio is important to us Truck Drivers. Also, we use the Los Angles weather station in New Mexico to know which interstate to use going into California. So, we would never be able to pick up the local AM and FM Stations that far out. We use this as a safety tool and need it real bad and XM has been providing us with the information that we need. So, please let XM keep telling us the information that we need for Safety of the motoring public as well as our safety and time.
